Simple and Fun Forex Trading Group (Linux Friendly)

Signals provided daily at (7AM)EST M-F (now open)

- I (Agent86) will provide daily trading signals for the EUR/USD currency pair. in the Trading Chat Room

- I will provide Buy,Sell,Stop/Loss,and Limit Order Signals

- Trading Signals are currently Free, however this might change to a monthly subscription in the future

- My preferred trading platform is MGForex (3 pips fixed spread) and their DealStationFX webbased platform is the best multi compatible platform available and works great on Mac and Linux

- However, I'm trading with Alpari with lower spreads and utilizes the MT4 charting which allowed me to backtest my strategy using my created EA. I would prefer the MGForex but they do not offer MT4 with their platform so just fyi on that.
